INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/FI 2003/000976

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	<u>1-23</u>	YES
	Claims	_____	NO
Inventive step (IS)	Claims	<u>1-23</u>	YES
	Claims	_____	NO
Industrial applicability (IA)	Claims	<u>1-23</u>	YES
	Claims	_____	NO

2. Citations and explanations (Rule 70.7)

The claimed invention

The examiner has understood the application to consist of the following:

The application aims at testing the transmitter and receiver parts of a mobile phone wherein the test equipment is built to support different operating frequencies. The mobile phone is tested by placing the phone inside a waveguide, wherein the waveguide is of ridge type and the ridge is bevelled to achieve a very broad band test device. A single coupling is used for the wideband measurements.

Prior art

Reference is made to the following documents:

D1: US 6188365 B1

D2: US 3383630 A

D3: Robert E. Collin, "Foundations for Microwave Engineering"

D4: US 6088582 A

D5: US 6021315 A

D6: EP 1223432 A1

Document D1 discloses a method to test a mobile phone within a waveguide, wherein the waveguide, for example, can be a ridge waveguide. The ridge will increase the relative bandwidth of the waveguide (see D1 column 5 lines 57-62).

Document D2 describes a waveguide having bevelled ridges for preventing any reflection which may otherwise occur (see D2 column 2 lines 11-16).

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.
Continuation of: BOX V

Document D3 describes the characteristics of a ridge waveguide, i.e. the ridge is capable of operating over a very broad band (see D3 page 205).

Statement of reason

The cited documents represent the general state of the art. The invention defined in claims 1-23 is not disclosed by any of these documents. Especially, the documents fail to show a testing device having a single coupling and bevelled ridges.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed arrangement and method for wideband testing of a radio device. Therefore, the claimed invention is not obvious to a person skilled in the art.

Accordingly, the invention defined in claims 1-23 is novel and is considered to involve an inventive step. The invention is industrially applicable.
